

TRAP Fencing System

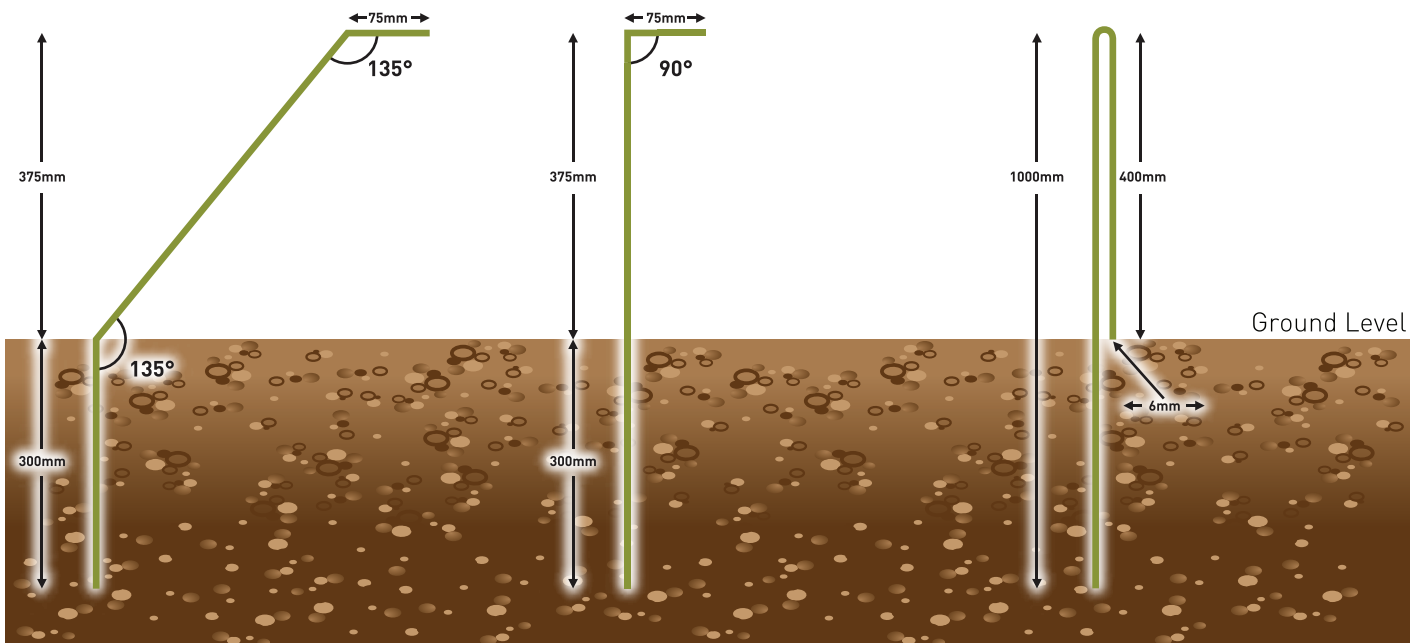

Total Reptile & Amphibian Protection

Specification Sheet

Profile of a one way TRAP panel

Profile of an impassable TRAP panel

Profile of a fixing pin

TRAP fencing is available in both temporary and permanent form. Each panel is 2.0 m long and 3 mm thick. The connecting posts are made from 10 mm diameter mild steel as shown.

Connection of panels

When fencing is installed each panel has a 50 mm overlap with the adjacent panel. A hole is drilled through the top lip of both panels and a post inserted. This process ensures that each join is sealed but allows for expansion and contraction of the material due to weather conditions.
